

SUMMARY

Business Intelligence and Data Analytics professional skilled in Python, SQL, ETL, data modeling, statistical analysis, and BI development. Experienced in transforming multi-source datasets into analytical solutions, automated reporting workflows, and interactive dashboards using Power BI and Tableau. Strong foundation in AWS, data pipelines, and cross-functional collaboration to deliver reliable, data-driven insights.

TECHNICAL SKILLS

Programming and Tools: Python, SQL, R, Pandas, NumPy, Git, GitHub, Jira, REST APIs, Microsoft Excel, Automation
Data Engineering: ETL Pipelines, Data Modeling, Data Warehousing, Data Cleaning, Data Validation, Data Processing
BI and Visualization: Power BI, Tableau, ServiceNow, Dashboard Development, Automated Reporting, BI Reporting, KPI Analytics, Matplotlib, Seaborn
Databases and Cloud: MySQL, PostgreSQL, BigQuery, Snowflake, AWS, Hadoop, HDFS, Oracle, AWS EC2, Amazon S3, NoSQL
Analytics: Exploratory Data Analysis, Statistical Analysis, Predictive Analytics, Feature Engineering
Business Analysis and Project Management: Requirements Gathering, Stakeholder Management, Agile, SDLC, Process Mapping, User Stories
Machine Learning: Scikit-learn, Predictive Modeling, NLP, Logistic Regression, Random Forest

EDUCATION

Bachelor of Science in Data Science, Minor in Business

New Jersey Institute of Technology (NJIT)

GPA: 3.6/4.0 | Dean's List

EXPERIENCE

Lead Data Analyst | Business Development

Aug 2025 - Jul 2026

Thaddeus Resource Center, CA

Remote

- Developed Python and SQL ETL workflows to extract, transform, and validate multi-source business data, reducing manual reporting effort by 35% and improving data reliability
- Analyzed multi-source datasets using SQL, Python, Power BI, and Tableau to identify operational trends, revenue metrics, and process improvement
- Developed and evaluated predictive models using Python and Scikit-learn, applying feature engineering, model validation, and statistical analysis to identify operational trends and optimization opportunities
- Translated business requirements into analytical workflows and technical solutions while collaborating with cross-functional teams as a lead to resolve data discrepancies and improve analytics delivery in an Agile environment

Business Analyst, Data Analytics

Sep 2024 - May 2025

Career Development Services, NJIT

Newark, NJ

- Processed and analyzed multi-source datasets using Python, SQL, and statistical analysis to identify performance trends, data gaps, and operational improvement opportunities
- Developed KPI dashboards and automated reporting workflows using BI tools, improving reporting efficiency by 30% and enabling stakeholders to monitor program performance
- Gathered stakeholder requirements, performed data cleaning and exploratory analysis, and communicated analytical findings through dashboards to support program evaluation and resource allocation

Operations Analyst | Data Analytics & Project Management

Jan 2023 - May 2025

Office of Residence Life, NJIT

Newark, NJ

- Developed operational dashboards and tracking systems to improve visibility into workforce activities and support data-driven decision-making across a 150+ staff organization
- Analyzed operational workflows, execution timelines, and performance metrics to identify process bottlenecks and recommend workflow improvements
- Implemented structured data collection and reporting workflows to improve data consistency, operational visibility, and performance monitoring

PROJECTS

Flight Data Analysis | Hadoop, MapReduce, AWS EC2, HDFS, Oozie

- Processed airline on-time performance data using Hadoop MapReduce to analyze flight delays, airport taxi times, and cancellation reasons across large historical datasets
- Developed MapReduce programs to aggregate airline performance metrics and identify patterns in flight operations
- Configured a Hadoop environment on AWS EC2 and orchestrated data processing tasks using Oozie workflows and HDFS

Customer Churn & Business Analytics | Python, SQL, ML, Predictive Analysis

- Analyzed 7K+ customer records using SQL and Python to identify behavioral and transactional factors associated with customer churn and retention
- Performed exploratory data analysis, feature engineering, and predictive analytics to identify high-risk customer segments and evaluate churn patterns
- Developed Tableau dashboards to communicate churn trends, customer segments, and KPIs, translating analytical findings into customer retention recommendations

CERTIFICATIONS
